

Processing recommendations

STEPWOOD® Light

STEPWOOD® is suitable for indoor use (dry rooms).

STEPWOOD® Light panels are surface-glued with D 3 glue.

The STEPWOOD® Light panels, should be left to adapt to the room climate openly for at least 24 hours before use.

The surface must be dry and free of dust and grease. Use commercially available, non-foaming adhesive or glue. The adhesive used depends on the respective substrate - please take into account the processing guidelines of the adhesive or glue manufacturer.

Gluing on requires contact pressure. We recommend counter matrices or elastic intermediate layers for pressing.

Surface treatment is possible with conventional paints and oils for furniture construction.

For self-supporting applications, please ensure an appropriately designed counter pull.

For any questions we are happy to help.
